

Ranjeet Kumar Gupta

Full-Stack Web3 & Rust / Smart Contract Developer

GitHub: github.com/Ranjeet2063 | **Email:** guptakumarranjeet150@gmail.com | **Telegram:** [@guptakumarranjeet](https://t.me/guptakumarranjeet) | **Portfolio:** [Soroban AgentKit](#)

EXECUTIVE SUMMARY

High-impact Web3 & Smart Contract Engineer with **35+ merged Pull Requests across top Stellar, Soroban, and AI open-source ecosystems** (zkpayroll, StarForge, Prompt-Hash, Eduvault, ElizaOS, Quittance0). Deep specialization in **Rust (Soroban SDK), TypeScript/Next.js**, decentralized wallet integrations (Freighter, MetaMask), deterministic escrow logic, and rigorous unit testing. Proven capability to autonomously diagnose protocol bottlenecks, implement production-grade features, and ship secure code under strict CI/CD gates.

TECHNICAL SKILLS

- **Smart Contracts & Blockchain:** Rust (Soroban SDK), Stellar Blockchain, Smart Escrows, On-Chain Settlement, Token Transfers, Contract Unit Testing.
- **Frontend & Web3 Integration:** TypeScript, JavaScript (ES6+), React, Next.js, Tailwind CSS, Freighter API, Stellar SDK (@stellar/stellar-sdk), Content Security Policy (CSP) Hardening.
- **Backend & Automation:** Python (Async background daemons, API wrappers, automation scripts), Node.js, Express, Fastify, RESTful APIs, JSON-RPC.
- **Tools & Security:** Git, GitHub Actions (CI/CD workflows), Jest, Vitest, Linux/Bash Scripting, Cryptographic Key Management (Ed25519).

PROVEN OPEN-SOURCE WEB3 EXPERIENCE

Core Contributor | Stellar & AI Ecosystem Projects (Open Source)

- **StarsForges / StarForge (PR #114):** Engineered 2,923 lines of production Rust smart contracts, implementing decentralized multi-signature governance, deterministic state transitions, and comprehensive integration test suites with zero regressions.
- **zkpayroll / zk-payroll-sdk (Merged PR #460, #414):** Designed and implemented deterministic payroll batch fingerprinting logic to guarantee tamper-proof batch execution. Implemented comprehensive unit tests ensuring zero-regression across edge cases in multi-recipient salary distributions.
- **Prompt-Hash-Stellar / prompt-hash (Merged PR #250):** Developed a standalone purchase receipt cryptographic verifier enabling off-chain purchase validation without full node RPC overhead.
- **Eduvault-Stellar / eduvault (Merged PR #212):** Engineered centralized MIME file-type policy enforcement with actionable security error codes and comprehensive quarantine test suite (25 automated tests covering ZIP bombs, threat payloads, and deduplication).
- **SPulse-Org / SPulse (PR #213):** Hardened dApp frontend security by vendoring @stellar/stellar-sdk and @stellar/freighter-api with strict subresource integrity verification and bulletproof Content Security Policy (CSP) headers.

- **Drago-Labs / golden-raccoon (PR #196):** Created machine-checkable release readiness gates with automated evidence generation for smart contract deployment pipelines.
 - **Nullifier-Systems / velo (PR #467):** Architected Soroban smart contract upgradability protocol, multi-sig threshold authorization, and storage state migration engine (v1 to v2).
-

KEY ACHIEVEMENTS & PROOF-OF-WORK

- **35+ Merged PRs:** Officially verified merged contributions across 8+ production Web3 repositories.
 - **Flagship Rust Engine:** 2,923 lines of production Rust in StarForge (PR #114).
 - **Flagship SDK:** Author of soroban-agentkit — production-grade AI Agent toolkit connecting LLMs (ElizaOS, LangChain, OpenAI) to Soroban smart contracts.
 - **Zero CI Failures:** 100% first-pass review rate maintained through exhaustive local test verification and strict adherence to protocol coding standards.
-

EDUCATION

Bachelor of Engineering (B.E.) in Computer Engineering

WORK AVAILABILITY

- **Status:** Immediate Availability for Full-Time & Contract Remote Roles
- **Contract Type:** Full-Time Remote, Dedicated Sprint Retainers, Advisory
